# Supplier Engagement Programme 2026

## PROGRAM CHARTER

The engagement programme that delivers our Procurement Sustainability Strategy 2026 across the value chain. It defines why this matters, who runs it, how we reach our suppliers, and by when.

Procurement Sustainability Strategy 2026

## Why this programme exists

71% of The Corporate's carbon footprint sits in the value chain. We cannot reach our targets, or meet our reporting obligations, without our suppliers.

The Corporate's 2023 footprint is 690,000 tCO<sub>2</sub>e. Around 71% of it, roughly 490,000 tCO<sub>2</sub>e, is Scope 3: emissions created in our supply chain, not inside our own plants. Supplier decarbonization is therefore the single largest lever the company holds, and the one we have the least direct control over today.

Two forces make supplier engagement urgent now. Ambition: our commitment to net-zero by 2045, with a 50% reduction against the 2023 base year by 2030. Compliance: under the EU Corporate Sustainability Reporting Directive (CSRD), The Corporate must report value-chain sustainability performance from the 2026 reporting cycle. We cannot report what we cannot see.

### THE MANDATE

This programme gives The Corporate structured, reliable visibility of Tier 1 supplier sustainability performance, and a route to act on it.

## Smart Intake, not another long survey

Supplier engagement usually fails for one reason: fatigue. Long, manual questionnaires sent to every supplier produce low response rates and unreliable data. A programme that suppliers will not complete is not a programme.

Our answer is a Smart Intake model: one onboarding portal and one assessment, governed by a deliberate efficiency rule. Suppliers who already hold a recognised third-party rating are not asked to repeat the work. Everyone else completes a single, well-structured assessment. Once, clearly.

### Recognise existing standards

A valid EcoVadis scorecard demonstrates performance already. Those suppliers submit it and move on.

### Ask once, then partner

The assessment is framed as the start of a working relationship, not a one-off audit. Strong performers earn preferential standing.

## What success looks like

- 01** Full visibility. Achieve 100% Tier 1 assessment coverage through EcoVadis or the questionnaire.
- 02** Report-ready data. Produce value-chain data of sufficient quality for CSRD disclosure and internal carbon-risk management.
- 03** Low burden. Minimise supplier effort through the EcoVadis bypass and a single, structured assessment.
- 04** Data into action. Convert submissions into joint decarbonization and improvement plans with prioritised suppliers.

# Who and what the programme covers

In scope. The Corporate's 500+ Tier 1 suppliers across all sourcing categories. Higher-risk Tier 2 suppliers are included where human-rights or conflict-minerals exposure requires it.

Priority themes. Set by the Strategy and summarised here: climate and value-chain emissions; pollution and substances of concern; water; circular economy and critical raw materials; human and labour rights; and business conduct. The Procurement Sustainability Strategy 2026 remains the authority on these topics and their targets.

Out of scope this phase. In-tool Scope 3 calculation, automated supplier scoring, supplier accounts with saved progress, and programmatic EcoVadis validation. At launch, the portal collects submissions in-session and does not retain a database; persistence is a later phase.

## 05 — GOVERNANCE & ROLES

### Who is involved

The programme is owned by the Sustainable Procurement Lead and sponsored by the Chief Procurement Officer with the Head of EHS & Sustainability. EHS designs and reviews the assessment; Procurement and Account Managers own the supplier relationships and distribution; suppliers complete the work.

| ACTIVITY                            | SPONSOR | PROG. OWNER | EHS & SUST. | PROCUREMENT | SUPPLIERS |
|-------------------------------------|---------|-------------|-------------|-------------|-----------|
| Priorities & targets (per Strategy) | A       | R           | C           | I           | —         |
| Assessment & portal design          | I       | A           | R           | C           | —         |
| EcoVadis eligibility criteria       | A       | R           | C           | I           | —         |
| Distribution & outreach             | I       | A           | I           | R           | —         |
| EcoVadis validation & PFAS triage   | —       | I           | A / R       | I           | —         |

## 06 — SUPPLIER ENGAGEMENT MODEL

### How we reach and route suppliers

Distribution. Procurement issues the portal link to all Tier 1 suppliers through the Procurement Portal, reinforced by account-manager outreach. One link, one programme, one deadline.

| ROUTE A — ECOVADIS                                                                                                                                          | ROUTE B — FULL ASSESSMENT                                                                                                                                                                                          |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Submit a scorecard<br>Suppliers holding a valid EcoVadis scorecard submit it and are exempt from the detailed assessment. Validations are processed weekly. | Complete the questionnaire<br>Suppliers without a current scorecard complete The Corporate's sustainability assessment across our priority themes: in the portal, by upload, or by returning the workbook offline. |

## TRIAGE RULE

Any pollution or PFAS flag routes automatically to EHS for technical review within 15 business days.

### 07 — PROGRAMME TIMELINE

## What happens next

| PHASE | STAGE             | WHEN                       | FOCUS                                                                                                                    |
|-------|-------------------|----------------------------|--------------------------------------------------------------------------------------------------------------------------|
| 01    | Portal Launch     | April 2026                 | Distribute the portal to 500+ Tier 1 suppliers; open both routes.                                                        |
| 02    | Data Submission   | Deadline 30 September 2026 | 100% Tier 1 response target; rolling EcoVadis validation and PFAS triage.                                                |
| 03    | Review & Scoring  | Q4 2026                    | EHS and Procurement review submissions, flag gaps, consolidate into the CSRD data repository; non-respondents escalated. |
| 04    | Partnership Plans | Q1 2027                    | Agree joint decarbonization and improvement plans with prioritised suppliers.                                            |

### 08 — SUCCESS MEASURES

## Key performance indicators

| MEASURE                                                                                    | TARGET                      | BY WHEN         |
|--------------------------------------------------------------------------------------------|-----------------------------|-----------------|
| Tier 1 assessment coverage (EcoVadis or questionnaire)                                     | 100% (85% interim, Q4 2026) | End 2027        |
| Tier 1 suppliers with a signed Code of Conduct                                             | 100%                        | End 2026        |
| Scope 3 (purchased goods & services) covered by suppliers with 1.5°C science-based targets | 60%, rising to 80%          | 2028, then 2030 |
| Suppliers (by in-scope Scope 3 spend) with an agreed decarbonization plan                  | 60% of Scope 3 spend        | 2028            |
| In-scope suppliers submitting a PFAS declaration                                           | 100%                        | End 2027        |
| Critical suppliers in high-stress basins with a documented water-risk plan                 | 100%                        | 2028            |

These engagement targets sit beneath the corporate anchors: net-zero by 2045, and a 50% reduction against the 2023 base year by 2030.

### 09 — RELATIONSHIP TO THE STRATEGY

# How the two documents fit together

---

READ WITH THE PROCUREMENT SUSTAINABILITY STRATEGY 2026

The strategy defines what matters: the priority topics, the risk rationale, and the targets. This charter defines how the engagement is run to deliver them: ownership, the supplier routes, and the timeline. Where the two meet, the strategy is the authority on material topics and targets; this charter is the authority on process, roles, and dates.
